INTRODUCTION

The Siddha system of medicine originated from the Southern part of India is one the traditional medical system in the world and deals with physical, psychological, social and spiritual well-being of an individual. The roots of this system are intertwined with the culture of ancient Tamil civilization. The system aims in attaining Eternal bliss and to defeat mortality. However to attain this one should possess enough physical and mental strength. Thus Siddha system emerged as a holistic / complete medical system in on these lines. [1]

The Siddha system of medicine is 32 forms of internal medicine were described in Siddha text. Kudineer (Decoction) is the one form of internal medicine in which powdered plants or parts of plants added with specific quantity of water prescribed, be boiled upto 1/4,1/8,1/16,1/24 of the initial quantity and taken after filtering it or prepared in a specific process if mentioned. [2] Parangipattai Kudineer is one among the poly herbal formulation contains 10 ingredients which is mentioned in siddha text book of Pharmacopoeia of hospital of Indian medicine. This drug used for all kind of skin diseases, insect bites, etc. The drug review of ‘Parangipattai Kudineer’, a poly herbal formulation gives evidence for its therapeutic action mentioned in literature. This review describes the phytochemicals, and medicinal uses of the part of each ingredient used in this formulation. Ingredients of the formulation and their pharmacological action in various research studies are discussed in this review.

KEYWORDS: Parangipattai Kudineer, Polyherbal formulation, Skin diseases, Siddha medicine.
INGREDIENTS OF PARANGIPATTAI KUDINEER

1. Smilax china. Linn
2. Picrorhiza kurroa. Royle
3. Rubia cordifolia. Linn
4. Coscinium fenestratum. Colebr
5. Terminalia chebula. Retz
6. Terminalia bellerica. Roxb
7. Acorus calamus. Linn
8. Pimpinella anisum. Linn
9. Azadirachta indica. A. Juss
10. Tinospora cordifolia. Miers

Figure 1: Image of ingredients of Parangipattai Kudineer.

Parangipattai kudineer is a polyherbal Siddha formulation containing 10 ingredients of plants origin their specific and individual locality names, action, phytochemistry and siddha medicinal uses are tabulated below in Table 1.
Table 1: Information about ingredients of Parangipattai kudineer.\(^{[14]}\)

Pharmacological activity of herbs in Parangipattai Kudineer

The efficacy of all ingredients of Parangipattai Kudineer was proved through the following research studies.

**Smilax china. Linn**

Ethyl acetate fraction of *Smilax china* rhizome showed good anti-Psoriatic activity in the mouse tail test, antiproliferative activity and nitric oxide inhibition assay. The plant *Smilax china* rhizome possesses anti-psoriatic activity which is in agreement with its traditional use.\(^{[12],[25]}\) *Smilax china* has anti-inflammatory activity. Its decoction (90 and 180 mg/kg; p.o) could significantly inhibit inflammatory swelling on adjunctive arthritis mouse.\(^{[26]}\) The methanol extract of *Smilax china* exhibit antimicrobial activity.\(^{[27]}\) In vitro antimicrobial activity of *Smilax china* was reported.\(^{[28]}\)

**Picrorhiza kurroa. Royle**

Immunomodulatory activity

The effect of an ethanolic extract of root of the *Picrorhiza kurroa.* Royle was studied on delayed type hypersensitivity, humoral responses to sheep red blood
cells, skin allograft rejection, and phagocytic activity of the reticuloendothelial system in mice.\textsuperscript{16}

**Anti-inflammatory activity**

*Picrorhiza kurroa*Royce’s root has apocynin. Apocynin concentration dependently inhibited the formation of thromboxane A2, where as the release of prostaglandins E2 and F2 was stimulated. Apocynin inhibited arachidonic acid induced aggregation of bovine platelets, possibly through inhibition of thromboxane formation. The rhizome of *Picrorhiza* is used to treat inflammatory diseases as a traditional medication.\textsuperscript{16}

**Antidiabetic activity**

Extract of *Picrorhiza* was found to lower blood glucose in laboratory animals. Chronic administration of the extract significantly reduced blood sugar in alloxan-induced diabetic rats for 10 days. The extract was also used to reduce the increased blood urea nitrogen and serum lipid peroxides in alloxan-induced diabetic animals and to inhibit the body weight reduction and leukopenia induced by alloxan administration.\textsuperscript{16}

In the streptozotocin induced diabetic rats, treated with a gavage of ethanol extraction of *Picrorhiza* herbal formulation. It reduced NADPH - oxidase dependent superoxide generation and decreased expression of malondialdehyde and advanced oxidation protein products in diabetic kidney. So, extraction of *Picrorhiza* improves diabetic nephropathy through inhibition of redox sensitive inflammation.\textsuperscript{16}

**Rubia cordifolia.Linn**

**Anti-Inflammatory Effect**

*Rubia cordifolia*, Linn. (Indian Manjishtha), was studied for the anti-inflammatory effect in rats with carrageenan paw oedema.\textsuperscript{17}

**Antibacterial Activity**

The antibacterial activity of the extracts of *Rubia cordifolia* root was significantly active against *B. subtilis* and *S. aureus* compared with streptomycin and penicillin G used as standards.\textsuperscript{17}

**Anti-proliferating Property**

Ethyl acetate fraction of the root of *Rubia cordifolia* inhibits keratinocyte proliferation in vitro and promotes keratinocyte differentiation in vivo.\textsuperscript{17}

**Anti-adipogenic activity** of 2-carboxethoxy-2, 3-epoxy-3-prenyl-1-1, 4-naphthoquinone (CMEP-NQ) isolated from the roots of *Rubia cordifolia*. Its effects on cell viability, apoptosis, and adipogenesis in 3T3-L1 preadipocytes were investigated.\textsuperscript{17}

**Coscinium fenestratum.Colebr**

**immunomodulatory activity**

The assessment of immunomodulatory activity of ethanolic extract (Crude extract), alkaloid fraction and non-alkaloid fraction of stem bark of *Coscinium fenestratum* was carried out by performing hemagglutinating antibody titer (H.A.).\textsuperscript{18}

**Anti-Depression**

*Coscinium fenestratum* is a common medicinal plant widely used in the Indochina region, but scientific data on its safety is very limited. Oral administration of plant alcoholic extract at dosages of 5, 10 and 20 mg/kg BW for 14 days increased the rats body weight and decreased the neuron density in the cerebral cortex, hippocampus and striatum. The plant extract significantly increased stereotyped behavior in licking but did not cause anxiolytic activity, anti-depression, sensory motor co-ordination impairment and ataxia.\textsuperscript{29}

**Terminalia chebulla.Retz**

Pharmacological investigations for antimutagenic,\textsuperscript{30} immunomodulatory effect,\textsuperscript{13} antibacterial,\textsuperscript{32,33} antifungal\textsuperscript{34} of different biological activities of *Terminalia chebula*in various in vivo and in vitro test models have been carried out based on the presence of chemical ingredients. The ethanolic extract of *Terminalia chebula* fruits possesses analgesic and anti-inflammatory activities in mice and rats at the doses of 250 mg/kg and 500 mg/kg and, 300 mg/kg respectively.\textsuperscript{15}

**Terminalia bellirica.Roxb**

Pharmacological activities such as antimicrobial, antioxidant, immunomodulatory, antispasmodic of different biological activities of *Terminalia bellirica* in various in vivo and in vitro test models have been carried out based on the presence of chemical ingredients.\textsuperscript{20}

**Acorus calamus.Linn**

**Anti-inflammatory**

Anti-inflammatory activity on keratinocyte hacat cells HaCaT cells induced the pro-inflammatory cytokines, interleukin-8 (IL-8) and interleukin-6 (IL-6) expressions after treatment with polyI:C or PGN. ACL inhibited the expression of IL-8 and IL-6 RNA and protein levels, and attenuated the activation of NF-kB and IRF3 after polyI:C treatment. ACL also inhibited expression of IL-8 and activation of NF-kB following PGN induction. ACL inhibits the production of pro-inflammatory cytokines through multiple mechanisms and may be a novel and effective anti-inflammatory agent for the treatment of skin diseases.\textsuperscript{31}

**Anti-cellular and immunosuppressive properties**

Modulation of immune response to alleviate disease has been of interest since long. Plant extracts have been widely investigated for possible immunomodulatory properties. The anti-cellular and immunomodulatory property of ethanolic extract of *Acorus calamus* rhizome has been evaluated. This extract inhibited proliferation of mitogen (phytohaemagglutinin; PHA) and antigen(purified protein derivative; PPD)-stimulated human peripheral blood mononuclear cells (PBMCs). In
addition, *A. calamus* extract inhibited growth of several cell lines of mouse and human origin. It also inhibited production of nitric oxide (NO), interleukin-2 (IL-2) and tumor necrosis factor-α (TNF-α). Intra cytoplasmic interferon-gamma (IFN-gamma) and expression of cell surface markers, CD16 and HLA-DR, on human PBMC, were not affected on treatment with *A. calamus* extract but CD25 expression was down Regulates. [36]

**Pimpinella anisum. Linn**
Pharmacological properties of *Pimpinella anisum* such as antimicrobial, antifungal, antiviral, antioxidant, and insecticidal effects have been reported of anise seeds. [22]

**Azadirachta indica. A. Juss**
The extracts showed potential antimicrobial activities against thirteen different strains of microorganisms. Secondly, they were screened in vitro for cytotoxicity test by brine shrimp lethality bioassay and results illustrated significant (p<0.05) cytotoxicity against *Artemia salina*. To test the analgesic properties of ethanol extract, our results indicated that two different doses of 250 and 500 mg/kg body weight induced writhing methods were used. Also, the anti-inflammatory tests were performed on Swiss Albino mice. Also, the anti-inflammatory tests were performed by carrageenan induced paw edema method on long Evans rats at the two different doses of 250 and 500 mg/kg body weight using ethanol extract. Our results indicated that *Azadirachta indica* possesses remarkable analgesic and anti-inflammatory activity. [27] Antibacterial activity [30] also present in *Azadirachta indica*.

**Tinospora cordifolia. Miers**
*Tinospora cordifolia* has an importance in traditional medicinal used for ages in the treatment of fever, jaundice, chronic diarrhea, cancer, dysentery, bone fracture, pain, asthma, skin disease, poisonous insect bite, snake bite, eye disorders. Pharmacological activities such as antimicrobial, antioxidant, antispasmodic, of different biological activities of *Tinospora cordifolia* in various in vivo and in vitro test models have been carried out based on the presence of chemical ingredients. [34]

*Tinospora cordifolia* also have pharmacological activities of immunomodulatory [39] anti-inflammatory activity. [40]

**CONCLUSION**
Herbal decoctions are most popular form of traditional medicine. The ingredients present in this formulation “Parangipatti Kudineer” have effective in the treatment of all skin diseases. Based on this evidence of Siddha literature and the modern scientific research studies also provide keyhole which result are Anti-Psoriatic, Immunomodulator, Anti-Inflammatory activities most presents of ingredients.
